- Uses Linux

- Why Linux?

- A powerful command-line interface
- Built for multi-user systems.
- An enormous amount of software is freely available

The screenshot shows a Linux desktop environment. A file manager window is open, displaying a sidebar with various folders and files. The main content area shows a website for UPPMAX SERVICES. The website has a dark theme and includes a search bar, a navigation menu, and a main heading "UPPMAX SERVICES". Below the heading, there is a paragraph of text describing UPPMAX as a multidisciplinary center for advanced computational science at Uppsala University. The website also features a "RESEARCH SHOWCASE" section and a "UPPMAX SUPPORT" section with links for "User Guides", "FAQs", and "Installed Software".

- **ls** – **list** the content of a directory

Navigation Commands

- **ls** – list the content of a directory

```
[dahlo@kalkyl4 dir]$
```

Name	Size	Type	Date Modified
 dir		-- folder	2012-01-05 13:44:47

- **ls** – list the content of a directory

```
[dahlo@kalkyl4 dir]$ ls
anotherFile.doc  directory1  file1.txt  file2.old  secondDirectory
```

Name	Size	Type	Date Modified
 dir		-- folder	2012-01-05 13:44:47
 directory1		-- folder	2012-01-05 13:45:43
 secondDirectory		-- folder	2012-01-05 13:46:21
 anotherFile.doc	27.6 KB	Word document	2012-01-05 13:44:47
 file1.txt	35.6 KB	plain text document	2012-01-05 13:44:15
 file2.old	2.2 KB	backup file	2012-01-05 13:44:33

- **ls** – list the content of a directory

```
[dahlo@kalkyl4 dir]$ ls -l
total 192
-rw-r--r-- 1 dahlo uppmx 28214 Jan  5 13:44 anotherFile.doc
drwxr-xr-x 2 dahlo uppmx  4096 Jan  5 13:45 directory1
-rw-r--r-- 1 dahlo uppmx 36458 Jan  5 13:44 file1.txt
-rw-r--r-- 1 dahlo uppmx  2273 Jan  5 13:44 file2.old

[dahlo@kalkyl4 directory1]$ pwd  
/home/dahlo/glob/work/testarea/temp/dir/directory1
```

Absolute/Relative paths

- All files and directories have a location, specified as their path
 - The root (“top”) of the file system is accessed through /, e.g. “ls /” or “cd /”
 - An absolute path is specified from the root, e.g. /proj/g2018028/nobackup/
 - These paths are unambiguous and definite, always referring to the same location regardless of current working directory

- All files and directories have a location, specified as their path
 - A relative path is specified from the current working directory; “Is documents/data/files/”
 - These paths are relative to your current location, and will refer to different places depending on your current location (pwd)

Both relative and absolute paths are useful, you should understand both

- Summary
 - ls – **l**ist content of directroy
 - cd – **c**hange working **d**irectory
 - pwd – **p**rint **w**orking **d**irectory
 - Use them to explore absolute/relative paths

Name	Size	Type	Date Modified
dir		-- folder	2012-01-05 13:44:47

Interaction Commands

cp - copy a file

```
cp <name of original> <name of copy>
```

Interaction Commands

cp - copy a file

`cp <name of original> <name of copy>`

`cp myText.txt copy_of_my_text.txt`

Interaction Commands

cp - copy a file

`cp <name of original> <name of copy>`

`cp /home/dahlo/test.txt ../`

mv - move a file

mv <name of the file> <name of the “copy”>

mv /home/dahlo/test.txt ../../myDocs/

Interaction Commands

mv - rename a file

`mv <original name> <new name>`

`mv myText.txt copy_of_my_text.txt`

Interaction Commands

less - view content of a file

```
less <file name>
```

```
less readme.txt
```

less - view content of a file

```
less <file name>
```

```
less readme.txt
```

```
This is the content  
of readme.txt
```

```
readme.txt (END)
```

less - view content of a file

```
less <file name>
```

```
less readme.txt
```

```
This is the content  
of readme.txt
```

```
readme.txt (END)
```

press **Q** to exit less

Instructions how to use programs

Easy to forget syntax

Manual pages

man <program name>

Ex.

man ls

(q to quit)

```

LS(1)                                User Commands                                LS(1)

NAME
  ls - list directory contents

SYNOPSIS
  ls [OPTION]... [FILE]...

DESCRIPTION
  List information about the FILES (the current directory by default).
  Sort entries alphabetically if none of -cftuvSUX nor --sort.

  Mandatory arguments to long options are mandatory for short options
  too.

-a, --all
  do not ignore entries starting with .

-A, --almost-all
  do not list implied . and ..
  
```

:[]

How do I log out?

`exit`

Exits only the current terminal

- Summary
 - cp – copy a file
 - mv – move a file
 - less – view a file
 - nano – view and edit a file
 - rm – remove a file
 - head / tail
 - wildcards
 - tab completion – use it!!!
 - top – see active processes
 - man – manual pages
 - exit – Log out current terminal

About 581 000 results (0,79 seconds)

However, **renaming multiple** or group of **files** quickly makes it very difficult task in a terminal. **Linux** comes with a very powerful built-in tool called **rename**. The **rename** command is used to **rename multiple** or group of **files**, **rename files** to lowercase, **rename files** to uppercase and overwrite **files** using perl expressions. Oct 10, 2013

[Rename – A Command Line Tool For Renaming Multiple Files in Linux](https://www.tecmint.com/rename-multiple-files-in-linux/)
