

Introduction to R

Workshop on Plotting in R

Lokesh Mano • 10-Sep-2021

NBIS, SciLifeLab

Contents

- [Course and webpage](#)
- [Overview of R](#)
- [Data formats](#)
- [Data frames](#)
- [Important functions](#)
- [Tips](#)

Quick checkups

If you don't recognize the correlation you see in the figure above, I would highly recommend you to read the following paper :)

[Yanai, I., Lercher, M. A hypothesis is a liability. *Genome Biol* 21, 231 \(2020\).](#)

- Coffe breaks (15 minutes is fine?)
- Webpage structure
- Plots from drop-down
- Times mentioned in schedule are **super** arbitrary

R

- Derived from a statistical programming language called S
- You can write your own functions
- Powerful and flexible.
- Available for all platforms
- **GUI** with Rstudio
- **RMarkdown**: Embedding codes and results together

Data Formats

- Wide format

	Sample_1	Sample_2	Sample_3	Sample_4
ENSG00000000003	321	303	204	492
ENSG00000000005	0	0	0	0
ENSG000000000419	696	660	472	951
ENSG000000000457	59	54	44	109
ENSG000000000460	399	405	236	445
ENSG000000000938	0	0	0	0

- familiarity
- conveniency
- you see more data

Data Formats

- Long format

Sample_ID	Gene	count
Sample_1	ENSG00000000003	321
Sample_1	ENSG00000000005	0
Sample_1	ENSG00000000419	696
Sample_1	ENSG00000000457	59
Sample_1	ENSG00000000460	399
Sample_1	ENSG00000000938	0

Sample_ID	Sample_Name	Time	Replicate	Cell	Gene	count
Sample_1	t0_A	t0	A	A431	ENSG00000000003	321
Sample_1	t0_A	t0	A	A431	ENSG00000000005	0
Sample_1	t0_A	t0	A	A431	ENSG00000000419	696
Sample_1	t0_A	t0	A	A431	ENSG00000000457	59
Sample_1	t0_A	t0	A	A431	ENSG00000000460	399
Sample_1	t0_A	t0	A	A431	ENSG00000000938	0

Data Formats

- Long format

Sample_ID	Sample_Name	Time	Replicate	Cell	Gene	count
Sample_1	t0_A	t0	A	A431	ENSG00000000003	321
Sample_1	t0_A	t0	A	A431	ENSG00000000005	0
Sample_1	t0_A	t0	A	A431	ENSG000000000419	696
Sample_1	t0_A	t0	A	A431	ENSG000000000457	59
Sample_1	t0_A	t0	A	A431	ENSG000000000460	399
Sample_1	t0_A	t0	A	A431	ENSG000000000938	0

- easier to add data to the existing
- Most databases store and maintain in long-formats due to its efficiency
- R tools like **ggplot** require data in long format.

Data Frames

- Let us take a quick look into `data.frame` in R:

```
## Select row 1 in column 2  
df[1,2]
```

ID	items	store	price
1	book	TRUE	2.5
2	pen	FALSE	8.0
3	textbook	TRUE	10.0
4	pencil_case	FALSE	7.0

```
## Select Rows 1 to 3 and columns 3 to 4  
df[1:3, 3:4]
```

```
## Select Rows 1 to 2  
df[1:2,]
```

```
## Select Column 1  
df[,1]
```

The diagram illustrates R indexing on a data frame. A central table with columns 'ID', 'items', 'store', and 'price' and rows 1-4 is shown. Colored dashed arrows point from code snippets to specific cells: a yellow arrow from `df[1,2]` to the 'book' cell; a blue arrow from `df[1:3, 3:4]` to the 'store' and 'price' columns of rows 1-3; a green arrow from `df[1:2,]` to the first two rows; and a red arrow from `df[,1]` to the 'ID' column.

- imported files are usually in `data.frame`
- Structured matrix with `row.names` and `colnames`
- Probably most used `data.type` in Biology!

Vectors

```
n <- c(2,3,4,2,1,2,4,5,10,11,8,9)
print(n)
```

```
## [1] 2 3 4 2 1 2 4 5 10 11 8 9
```

```
z <- n +3
print(z)
```

```
## [1] 5 6 7 5 4 5 7 8 13 14 11 12
```

```
z <- n +3
mean(z)
```

```
## [1] 8.083333
```

```
s <- c("I", "love", "Batman")
print(s)
```

```
## [1] "I"      "love"   "Batman"
```

Vector types

- `int` stands for *integers*
- `dbl` stands for *doubles* or real numbers
- `chr` stands for *character* vectors or strings
- `dtm` stands for *date and time*,
- `lgl` stands for *logical* with just TRUE or FALSE
- `fctr` stands for *factors* which R uses to state categorical variables.
- `date` stands for *dates*

You can find what kind of vectors you have or imported by using the function `class()`

Thank you. Questions?

R version 4.1.1 (2021-08-10)

Platform: x86_64-pc-linux-gnu (64-bit)

OS: Ubuntu 18.04.5 LTS

Built on: 📅 10-Sep-2021 at 🕒 13:01:07

2021 • SciLifeLab • NBIS
