

#### Quality of Life

a better terminal experience

2023-11-14

Martin Dahlö martin.dahlo@nbis.se

Enabler for Life Science

#### Terminal improvements

- There are a lot of small tips that will improve your experience greatly.
- This lecture will cover some of them:
  - Navigating the terminal
  - Finding files and contents of files
- Also covered: How to transfer files to/from Rackham

### **Command history**

Up & down arrow to step through history

#### **Command history**

Up & down arrow to step through history

Ctrl+r to search through previous commands

### **Command history**

Up & down arrow to step through history

- Ctrl+r to search through previous commands
  - Ctrl+r again to search further back

#### Quicker cursor

 Navigating the command line can be done quicker than with just left and right arrows

#### Quicker cursor

 Navigating the command line can be done quicker than with just left and right arrows

ctrl+a and ctrl+e places the cursor at the beginning and end of command line respectively

#### Quicker cursor

 Navigating the command line can be done quicker than with just left and right arrows

ctrl+a and ctrl+e places the cursor at the beginning and end of command line respectively

alt+b to go back a word, alt+f to go forward

# **Cursor position**

- No need to be at end of line when pressing enter
- Only determines where you type or erase

```
$ echo "Position not important"
```

# **Cursor position**

- No need to be at end of line when pressing enter
- Only determines where you type or erase

```
$ echo "Position not important"
```

```
user@rackham5 ~/ $
```

```
user@rackham5 ~/ $ cd /proj/g2020009
```

```
user@rackham5 ~/ $ cd /proj/g2020009 user@rackham5 /proj/g2020009 $
```

```
user@rackham5 ~/ $ cd /proj/g2020009 user@rackham5 /proj/g2020009 $ cd -
```

```
user@rackham5 ~/ $ cd /proj/g2020009
user@rackham5 /proj/g2020009 $ cd -
user@rackham5 ~/ $
```

```
user@rackham5 ~/ $ cd /proj/g2020009
user@rackham5 /proj/g2020009 $ cd -
user@rackham5 ~/ $ cd -
```

```
user@rackham5 ~/ $ cd /proj/g2020009
user@rackham5 /proj/g2020009 $ cd -
user@rackham5 ~/ $ cd -
user@rackham5 /proj/g2020009 $
```

- Copy files between computers
- Similar syntax as cp

rsync user@host:/path/to/file /local/path

- Copy files between computers
- Similar syntax as cp

rsync user@rackham.uppmax.uu.se:/home/user/t.txt

- Copy files between computers
- Similar syntax as cp
- rsync: -a save modification time, -P show progress

rsync -aP user@rackham.uppmax.uu.se:/home/user/t.txt

- Copy files between computers
- Similar syntax as cp
- rsync: -a save modification time, -P show progress
- Copy files either direction

```
rsync -aP user@rackham.uppmax.uu.se:/home/user/t.txt .
rsync -aP t.txt user@rackham.uppmax.uu.se:/home/user/
```

- Copy files between computers
- Similar syntax as cp
- rsync: -a save modification time, -P show progress
- Copy files either direction

```
rsync -aP \
user@rackham.uppmax.uu.se:/sw/courses/ngsintro/linux/qol/aa.fa \
```

#### **Find**

Find files based on name

\$ find /path/to/look/ -name nametolookfor.txt

#### **Find**

#### Find files based on name

```
$ find /path/to/look/ -name nametolookfor.txt
$ find . -name "*.txt"
```

Searches content of files

\$ grep texttofind filetolookin.txt

#### Searches content of files

```
$ grep texttofind filetolookin.txt
```

```
$ grep "text to find" /path/to/files/*.txt
```

#### Searches content of files

```
$ grep texttofind filetolookin.txt
$ grep "text to find" /path/to/files/*.txt
$ cd /sw/courses/ngsintro/linux/qol
$ grep MYNAME protein seq.fa
```

#### Searches content of files

```
$ grep texttofind filetolookin.txt
$ grep "text to find" /path/to/files/*.txt
$ cd /sw/courses/ngsintro/linux/qol
$ grep MYNAME protein_seq.fa
$ grep -r "found" filetree/*
```

- Kills whatever your terminal is currently running
  - Sometimes we want to end programs prematurely, for whichever reason.
- \$ cd /sw/courses/ngsintro/linux/qol \$ python friendly counter.py

- Kills whatever your terminal is currently running
  - Destroys hanged or non-executing commands
  - Cancel commands that are running for too long
  - Cancel commands that you realize are incorrect

#### **SNIC-UPPMAX CHEAT SHEET**

| ssh -AX user@host             | Connect to host with ssl                     |
|-------------------------------|--|
| Getting Help                  |  |
| man command                   | Read manual for command                      |
| apropos keyword               | Find commands related to keyword             |
| File commands                 |  |
| ls                            | List contents of current di                  |
| ls -al                        | Detailed listing with hidden files           |
| cd dir Go to direc            | ctory (if dir is not given, go to home dir   |
| pwd                           | Show the current directory                   |
| mkdir dir                     | Create directory                             |
| rm file                       | Remove file                                  |
| rm -r dir                     | Recursively remove directory                 |
| rm -f file                    | Force remove file                            |
| rm -rf dir                    | Force recursively remove directory           |
| cp -i file1 file2             | Copy file1 to file:                          |
| cp -r dirl dir2               | Recursively copy director                    |
| mv -i filel file2             | Rename or move file/director                 |
| (if file                      | 2 is a directory, it places file1 inside it  |
| ln -s file link               | Create a symbolic lini                       |
| touch file Create fi          | le or update timestamp of existing one       |
| command > file                | Write output of a command to a file          |
| command >> file               | Append (add to end) output to file           |
| less file Show con            | itents of file, with scrolling (quit with 'q |
| head file                     | Show 10 first lines of file                  |
| tail file                     | Show 10 last lines of file                   |
| tail -f file Show file        | e as it grows, starting with 10 last lines   |
| nano file Edit file           | with a simple command line text editor       |
| File Permissions              |  |
| chmod permission fi           | ile Change file permission                   |
| chmod -R perm dir             | Recursively change permission for di         |
| Ex: Allow read/write/exec for | or user, r/w for group and r for others:     |
| chmod u=rwx,g=rw,o=           | · ·  |
| chmod a-x file                | x: Remove execute permission for al          |

| Arch barrern TTTES   | Find lines in files, containing pattern  |
|--|--|
| grep -r pattern di   | E Recursively do same as above in dir  |
| command   grep pat   | tern Run grep on command output  |
| find dir   grep pa   | ttern Find filepaths matching pattern  |
| Compression  |  |
| tar cf file.tar fi   | les Create tar archive, adding files   |
| tar xf file.tar  | Extract tar archive  |
| tar czf file.tar.g   | z files With gzip compression  |
| tar xzf file.tar.q   | z Extract gzip compressed tar archive  |
| gzip file  | Compress file with gzip  |
| gunzip file.gz   | Decompress file with gzip  |
| UPPMAX modules   | THE AMERICAN   |
| module avail   | List available modules   |
| module load module   | name Load module   |

### Using multiple terminals

- Launch and use several terminals for better overview of your work
  - Write your scripts in one terminal, run your scripts in another, check the results in a third...
- Just like you might have several tabs in your browser or have several documents open at once
