PYTHON

- Graphical text editor more similar to what you might be used to
- Launch through command line:

```
$ gedit
```

A screenshot of the Gedit text editor interface. The window title is "test.py" located at "~/work/tmp". The file contains the following Python code:

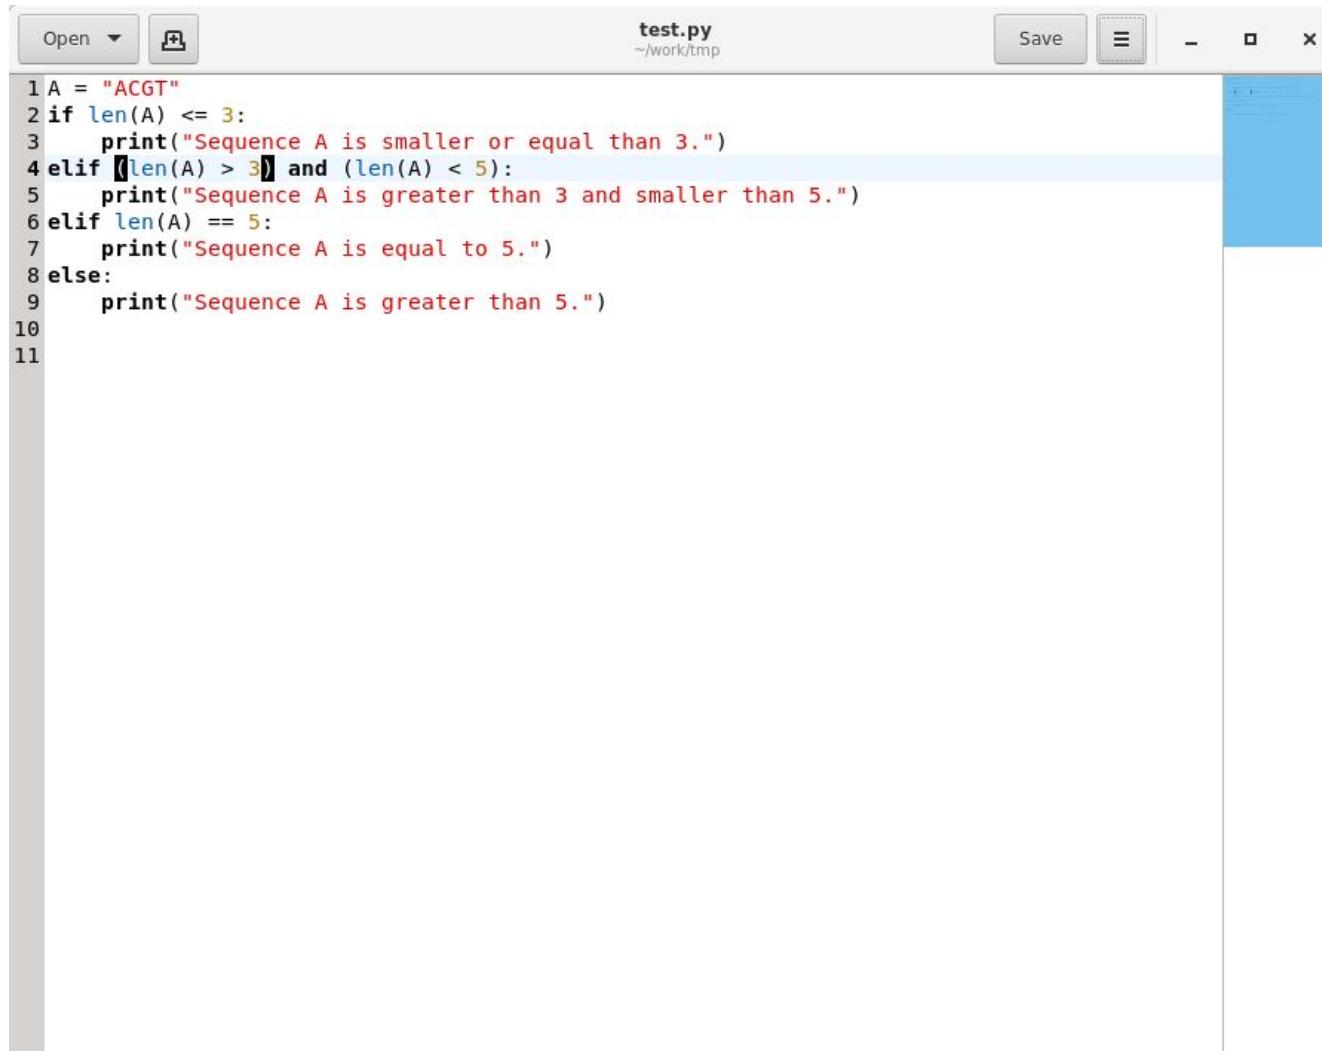

```
A = "ACGT"
if len(A) <= 3:
    print("Sequence A is smaller or equal than 3.")
elif (len(A) > 3) and (len(A) < 5):
    print("Sequence A is greater than 3 and smaller than 5.")
elif len(A) == 5:
    print("Sequence A is equal to 5.")
else:
    print("Sequence A is greater than 5.)
```

The status bar at the bottom shows "Python" as the language, "Tab Width: 4", "Ln 4, Col 7", and "INS" indicating insert mode.

A screenshot of the Gedit text editor interface. The title bar shows "test.py" and the file path "~/work/tmp". The main window displays the following Python code:

```
1 A = "ACGT"
2 if len(A) <= 3:
3     print("Sequence A is smaller or equal than 3.")
4 elif [len(A) > 3] and (len(A) < 5):
5     print("Sequence A is greater than 3 and smaller than 5.")
6 elif len(A) == 5:
7     print("Sequence A is equal to 5.")
8 else:
9     print("Sequence A is greater than 5.")
10
11
```

The code uses syntax highlighting where keywords like "if", "elif", and "else" are in red, and strings are in blue. The editor has a light gray background with a vertical scroll bar on the left and a horizontal scroll bar at the bottom. The status bar at the bottom right shows "Python" as the language, "Tab Width: 4", "Ln 4, Col 7", and "INS" indicating insert mode.

A screenshot of the Gedit text editor interface. The title bar shows "test.py" and the file path "~/work/tmp". The menu bar includes "File", "Edit", "View", "Search", "Tools", and "Help". The toolbar contains icons for "Open", "Save", and "Close". The main code area displays the following Python script:

```
1 A = "ACGT"
2 if len(A) <= 3:
3     print("Sequence A is smaller or equal than 3.")
4 elif [len(A) > 3] and (len(A) < 5):
5     print("Sequence A is greater than 3 and smaller than 5.")
6 elif len(A) == 5:
7     print("Sequence A is equal to 5.")
8 else:
9     print("Sequence A is greater than 5.")
10
11
```

The code uses color-coded syntax highlighting: blue for keywords like "if", "elif", "else", "def", "class"; red for strings ("ACGT", "Sequence A"); and green for comments (the multi-line condition). The line numbers 1 through 11 are also visible on the left.

A screenshot of the Gedit text editor interface. The window title is "test.py" located at "~/work/tmp". The file contains the following Python code:

```
1 A = "ACGT"
2 if len(A) <= 3:
3     print("Sequence A is smaller or equal than 3.")
4 elif (len(A) > 3) and (len(A) < 5):
5     print("Sequence A is greater than 3 and smaller than 5.")
6 elif len(A) == 5:
7     print("Sequence A is equal to 5.")
8 else:
9     print("Sequence A is greater than 5.")
10
11
```

The code uses syntax highlighting where keywords like "if", "elif", and "else" are in blue, and strings are in yellow. The file is currently in Python mode, as indicated by the status bar at the bottom which also shows "Tab Width: 4", "Ln 4, Col 7", and "INS".

Theme: Oblivion

A screenshot of the Gedit text editor interface. The window title is "test.py" located at "~/work/tmp". The file contains the following Python code:

```
1 A = "ACGT"
2 if len(A) <= 3:
3     print("Sequence A is smaller or equal than 3.")
4 elif (len(A) > 3) and (len(A) < 5):
5     print("Sequence A is greater than 3 and smaller than 5.")
6 elif len(A) == 5:
7     print("Sequence A is equal to 5.")
8 else:
9     print("Sequence A is greater than 5.")
10
11
```

The code uses Monokai syntax highlighting, where keywords like "if", "elif", and "else" are colored red, and strings are in green. The editor's status bar at the bottom shows "Python" as the language, "Tab Width: 4", "Ln 4, Col 7", and "INS" indicating insert mode.
